DEPARTMENT OF ECOLOGY
URBAN BAY ACTION PROGRAM INSPECTION REPORT

Follow-up inspection

ENTITY: Jones-Goodell

INSPECTOR: Mercuri

LOCATION: 1690 Marine View Drive

DATE: 12/30/92

CONTACT: Harold Hahn, Superintendent

FACILITY DESCRIPTION:

Inspectors Joyce Mercuri and Marv Coleman arrived on site at 1:30 p.m. and talked with Harold Hahn. Last May Jones-Goodell was discovered to have a problem with spent sandblast grit used as fill behind a bulkhead, and with grit spread around in the gravel yard.

At this visit, the grit behind the bulkhead had been excavated and sent to a concrete manufacturer. Mr. Hahn said they were planning to fill the space in with clean fill. The grit in the gravel yard area had also been removed. There was still some grit on the surface in the area of the bulkhead, marine railway, and gravel yard. I told Mr. Hahn that they should sweep or shovel this up and dispose of it also. He said they would do so.
